

Setting Up HaloGuard on iPhone

A quick guide to connecting the HaloGuard Watch and iPhone.

On the Phone

1

Download HaloGuard

Download the HaloGuard app from the App Store and create an account. Log in with mobile number and OTP code.

2

Allow Permissions

Allow all permissions requested for HaloGuard to work correctly.

3

Add the Guardians

Tap My Guardians, then the + in the top right corner to add the Guardians. They will receive an SMS with instructions to accept.

On the Watch

4

Charge the Watch

Charge the HaloGuard watch.

5

Access Watch Apps

Swipe up on the watch face to access the apps.

6

Connect to WiFi

Open Settings, tap Connections, and make sure WiFi is on. Add the home WiFi and iPhone Hotspot networks and passwords.

7

Log In on the Watch

Navigate back to watch apps, open HaloGuard, and log in with the mobile number. Enter the OTP code sent to verify the account.

8

Allow Permissions

Press Allow, or Allow While Using App, for all permissions requested.

FYI: At home, HaloGuard uses the home WiFi to send alarms, and the phone does not need to be close by. Away from home, turn on the iPhone personal hotspot and keep the phone close to maintain the connection. All permissions must be allowed for HaloGuard to work as expected. Test alarms with the Guardians so everyone knows what to expect.
